

Final Project Proposal

1. I am planning to do a portfolio website which is for my resume and cover letter. The website will include all original songs, cooperation projects (mixing and mastering) and sound design projects (Ads, game soundtracks) I have done during my whole Berklee life. It will also include my music video that I created with previous record label, some promo pictures that I took two months ago, and probably also some dj mix sets which I did in Berklee.
2. The website purpose is very specific, it's for internship and job of next spring and next summer which directly relate to my cpt and opt.
3. The resources I will use are all my works during Berklee studying period.
4. My audience is my future manager.
5. The structure will be at least four pages for now. One is my introduction with promo pictures; one is my original songs included cooperation mixing and mastering projects; one is sound design projects with specific related pictures; and one is a common contact page includes name, topic, text etc things.
6. I think I should be assessed by how this website looks like, including if it is on professional level and well-made; if it has issue of transferred link; if the pictures and text are clean and clear etc.
