HW Pyramid:

I set up 'pyramid' as a defined function.

I set up 'i' in range (1, n+1).

I set up 'j' as another function in range (1, n+1).

I set up "if 'i' + 'j' <= n, print a space." And if not, it will print '#'.

If n = 1, 'i' + 'j' will definitely > , so it will print '#'.

And finally I set up the 'num' as 8.

Then everything is all set!
